***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

The Fujita reference discloses a fuel cell system and a method of controlling a fuel cell system comprising: fuel cell "200"; a CPU of a power control unit "700" that provides a required electric power (target power) for the fuel cell "200"; a voltage sensor "868" for detecting an actual output voltage of the fuel cell and a current sensor "870" for detecting an actual output current of the fuel cell, wherein these two sensors combine to form a detector for detecting output power from the fuel cell; and a power control unit "700" (controller) comprising: a CPU (target current computing unit) that calculates an electric current  $I_{fc}$  (target current) corresponding to the required electric power  $E_f$  (target power) directly from a power-current characteristic map obtained from a nominal output characteristic of the fuel cell, wherein the nominal output characteristic of the fuel cell is a reference output characteristic (See paragraphs [0153],[0159],[0173],[0180] and Figure 12, upper graph).

However, Fujita et al does not expressly teach a command output power computing unit which calculates a command output power of the fuel cell from the product of the target current and the actual output voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1795

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
